

Journalist says next generation will all be chipped

This link from my friend Adam...

Kevin Haggerty, in an article for the Toronto Star, believes that within [one generation](#) the pressure will be on for everyone to receive an implantable RFID microchip in their arm. In his article, Kevin Haggerty outlines how far implantable microchips have come, and how he is expecting the public will be "coerced" into accepting such a system. Microchip implants, marketed mainly by VeriChip Corporation, have come on a long way. After the Asian Tsunami in 2004, one article by Star-TechCentral even suggested the use of implantable microchips as a means of identifying the dead - and also

[let slip](#)

that the best places for implantation were in the right hand or forehead, just like the Bible states...

Quote: "Some current technology could have helped here (Asian Tsunami). Here's one possible scenario: The VeriChip is about the size of a grain of rice, virtually undetectable and practically indestructible once inserted under the skin - **usually in your right hand or forehead.** The chip has a special polyethylene sheath that helps skin bond to it, so that it stays in place. Since the chip has no battery, there are no chemicals to worry about and the chip never "runs down" - its expected life is up to 20 years.

Since then, the CEO of VeriChip has suggested to the US Government that [soldiers](#) should be implanted with VeriChip, replacing the old metal dog-tags currently in use by the army. He also suggested

[immigrants](#)

to the United States should be implanted, in order to solve the crisis on the southern border. In another development, it was revealed that Tommy Thompson, who is on the board of Directors for the VeriChip Corporation, may be running for the

[Presidency](#)

. Then of course we have the global march towards biometric identification, and Prime Minister Blair's revelation that such a scheme is

[unavoidable](#)

, if we want to further scientific and technological progress. And none of us want to be blamed for hindering progress now, sure we don't. Kevin's article follows my own line of thought, that compulsory chipping will come about gradually through pressure from many different areas. At present we are experiencing the "stick" approach, with global terrorism and fraud being marketed as the main reasons to adopt compulsory identification technology. This will help remove the initial stigma from the technology if we are made to believe we will feel safer. But if the population as a whole is to accept RFID implants, more needs to be done, and that's when the commercial sectors, the government, security and businesses start coming on board, to help us to believe that this is for the "greater good" of society. All this leads Kevin Haggerty to believe that within one generation,

RFID implants will become part of everyday life.

Quote: *"In one generation, then, the cultural distaste many might see as an innate reaction to the prospect of having our bodies marked like those of an inmate in a concentration camp will likely fade. In the coming years some of the most powerful institutional actors in society will start to align themselves to entice, coerce, and occasionally compel the next generation to get an implant."*

There are of course efforts underway by certain governmental groups (I believe most likely the Bilderberg are behind this global push for biometric IDs) to condition the general public for mass identification. But the Bible states that during the tribulation period, it will be the Antichrist who will be the one to "cause all both small and great, rich and poor, free and bond" to receive the mark.

Revelation 13:16

And he (the false prophet on behalf of the Antichrist) causeth all, both small and great, rich and poor, free and bond, to receive a mark in their right hand, or in their foreheads: And that no man might buy or sell, save he that had the mark, or the name of the beast, or the number of his name.
